THILLAI PRABAKAR

SOFTWARE ENGINEER

ABOUT ME

Versatile Software Engineer with expertise across AI/ML, software development, full-stack engineering, and hands-on experience in banking data engineering and ETL operations. Experienced in building intelligent models, scalable applications, and data-driven systems, with a strong interest in solving real-world problems through software, automation, and innovation.

EDUCATION

B.Tech Artificial Intelligence and Data Science
Mepco Schlenk Engineering College, Sivakasi
2021 - 2025

Higher Secondary Education
Raja Matric Hr Sec School, Ramanathapuram
2020 - 2021

WORK EXPERIENCE

Probationary Banking Manager (Data Engineer)
City Union Bank | Chennai
Nov 2025 - March 2026

- Supported data warehouse operations using PostgreSQL and Greenplum.
- Built and monitored ETL pipelines using Shell scripting and Apache Airflow.
- Wrote SQL queries for data extraction and reporting.
- Monitored Linux servers and workflow jobs to ensure smooth operations.
- Troubleshot data pipeline issues and database performance problems.
- Supported DC/DR environments for high availability.

PROJECTS

LLM Based Resume Ranker

A Python Streamlit application, enabling users to upload resumes and job requirements for ranking. Incorporated embedding, cosine similarity, and vectorization techniques for resume processing. Assigned ranks to resumes based on relevance to job descriptions. Provided resume scores and generated summaries for better evaluation and decision-making.

Explainable DualLexiCaps: A Hybrid Approach for Hate Speech Detection with Mistral Summarization

I developed DualLexiCaps, a hybrid deep learning model for hate speech detection that combines BiLSTM, Capsule Networks, and an attention mechanism to capture contextual meaning in text. The model uses Twitter GloVe embeddings and auxiliary linguistic features to improve accuracy. After classification, a fine-tuned Mistral 7B model generates concise explanations for each prediction, making the system both accurate and explainable for real-world content moderation.

Netflix Clone

Developed a Netflix clone using the MERN (MongoDB, Express.js, React.js, Node.js) stack, with React for frontend, Firebase for user authentication, TMDB for API key retrieval, and MongoDB for database management. Implemented features including user authentication, movie streaming and search functionality.

Smart Face Based Access Control - CV

Developed a Smart Face-Based Access Control System leveraging facial recognition and deep learning techniques to automate realtime user verification, entry/exit logging, and attendance management for enhanced security and efficiency.

Real-Time Face Emotion Detection

A machine learning and deep learning techniques, including Convolutional Neural Networks (CNN) and OpenCV (cv2). Utilized computer vision algorithms to accurately detect and classify facial expressions in real-time. Demonstrated proficiency in applied machine learning, deep learning, and computer vision for practical applications.

Accident Detection And Alert System

Developed an IoT-based system to detect accidents and send real-time alerts with location details via email. The project aims to enhance emergency response by providing instant notifications. Designed for efficiency and reliability in real-world scenarios, improving road safety measures.
